

DELIVERED WITH

CARE & COMPLIANCE

patheon

Truckload Services at Life Sciences Standards

We understand that pharmaceutical product shipments must be managed with the utmost care and security to ensure product integrity and complete chain of custody. This focus on quality and compliance begins with our team of logistics professionals who undergo complete background checks and a Security Threat Assessment (administered by the TSA). We extend this mandate to our Preferred Carrier network which is subject to a rigorous qualification program that is under the oversight and approval of our Quality & Regulatory Compliance team.

Our Life Science shipments are restricted to this Preferred Carrier network which is uniquely specialized to include temperature controlled and validated trailers (Dedicated Full Truckload - FTL). We have established an extensive truckload

carrier base to support all modes of transportation. Our team assists with consolidation efforts to drive unit shipping cost down. Depending on the parameters associated with our clients' goods, we can offer solutions where bulk shipments are moved to a centralized location, within a specific geographic area, and use a hub and spoke distribution model to deliver the good to its final location.

As a non-asset based business we can easily expand capacity as and when required. We are structured both internally and externally to handle capacity surges or increases in volume, by maintaining a flexible infrastructure that can expand and contract depending upon our individual clients' needs or as their business changes.

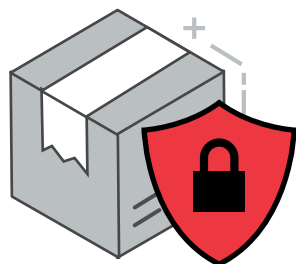

“Our clients expect optimal security, regulatory compliance and product integrity—and we deliver.”

1

Shipment Security

- Fully gated facilities with CCTV
- Driver background checks
- Trailer seals and team drivers
- GPS and Geo-fencing

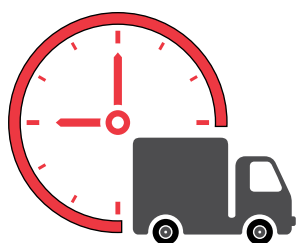

2

Shipment Integrity

- Temperature mapped trailers
- In-transit temperature monitoring
- Contingency plans with documented processes

Service Highlights

3

Proactive Management

- Temperature & location tracking
