

## Direct-to-Patient pharmacy service

Overview of our pharmacy solution to support decentralized clinical trials in the US

### HOW IT WORKS

- 1

Your investigational material is packaged and labeled at our Thermo Fisher Scientific site. From there it travels to our Thermo Fisher Scientific pharmacy.

---

- 2

Your material is received into our pharmacy by licensed pharmacists, inventoried, and stored according to specifications.

---

- 3

A principal investigator sends the prescription and IRT order (if applicable) to our pharmacy.

---

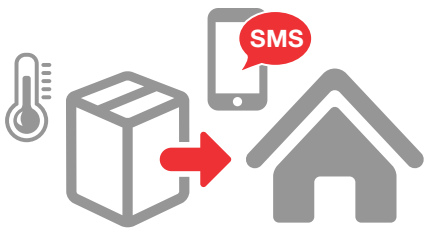

- 4

A pharmacist fulfills the order by generating labels and any additional documentation. In addition, they will verify the order against the prescription for accuracy.

---

- 5

Our Direct-to-Patient Contact Center enables delivery to the patient as per date and time window coordinated and communicated with the patient or home nurse. A qualified courier ensures the delivery of the study medication and ancillaries (if applicable) to the patient's home per your trial needs.
