

Biorepositories: Ten considerations for determining whether to build or buy

When working with temperature-sensitive biological materials, the need for safe and reliable sample storage is crucial. Biorepositories meet this custom demand, but is it better to build your own, or outsource to a third party? Establishing a biorepository requires resources you may or may not have — and may not have even considered.

Click on each consideration for more details to help you determine whether to build or buy (outsource) a biorepository suite.

Building a biorepository requires a huge commitment in terms of time and money. While that may be the right decision for some companies, not everyone has the resources to take on such a task. For those who choose to outsource, the right partner can help reduce the total cost of ownership and provide peace of mind that your critical material is safe.

Thermo Fisher Scientific has 35+ years of experience managing critical materials and a global network of GMP facilities.
