

## Direct-to-Patient Pharmacy service

Overview of our EU central pharmacy solution to support decentralized clinical trials in the EU

**DELIVERED  
WITH  
SPEED & SERVICE**

### How it works

- 

1 Your investigational material is packaged and labeled at our Thermo Fisher Scientific site. From there it travels to our EU central pharmacy partner.
- 

2 Your material is received into our EU central pharmacy by licensed pharmacists, inventoried, and stored according to specifications.
- 

3 The order will be provided via the clinical site or IRT to Thermo Fisher Scientific. We will arrange for transportation and delivery with patient details. The qualified courier provides shipping materials for the shipment which is then transferred to the EU central pharmacy.
- 

4 A pharmacist fulfills the order including additional documentation as required.
- 

5 Our Direct-to-Patient Contact Center coordinates the delivery as per date and time window requirements and communicates with the patient and/or home nurse. A qualified courier ensures the delivery of the study medication and ancillaries (if applicable) to the patient's home per your trial needs.

If you have questions about our global Direct-to-Patient service offering, please contact us.
